Getting finer resolution on control panel sliders (#p1796)

by **Digital Larry** » Mon Sep 15, 2014 9:28 am

Sometimes the sliders need to cover a really wide range of values, and don't obviously allow fine control over the input value. However, if you first click on a slider's handle and drag it to the vicinity of where you'd like it, you can then use the keyboard's arrow keys to scan to your target value with much higher resolution. 😊
