Simple room reverb (#p2878)

by **Digital Larry** » Fri Oct 28, 2016 10:36 am

This one uses 3 delay lines with relative lengths in a ratio of 3 - 4 - 5 which I just learned is considered a good ratio for such things. No all pass filters or anything fancy. Adjustable low pass filters in each delay line feedback. Doesn't sound bad for something so simple!

Pot 0 = delay time (room size)
Pot 1 = Feedback (room liveliness)
Pot 2 = low pass (aka HF damping)
