Here's a bank of chorus patches. OK, just 5 of them (#p2610)
by **Digital Larry** » Fri Jan 01, 2016 10:10 pm

Someone asked me to show how to make a chorus.

Unzip the file and use "Open Bank" to load it. Works with build 998 and I hope later (998 is the current release).

[Edit 04-14-2018: the original ZIP file got corrupted and I couldn't locate the original bank file, so I've recreated some patches quickly showing what I think I was trying to demonstrate.]

Check "patch information" for each patch to see my notes on these. Patches 1-4 represent my quick dialing up of several chorus sounds which are pleasing to me.

The Power block can be placed after a Pot control to change its curve or "taper". Using increasing powers causes the controlled effect to come in "later" in the pot's rotation. Use increasing powers with "invert" and "flip" both set in the control panel to make the effect come in "sooner". Even when you are using a single control, you can process it differently for each destination if that's what you want. This allows you to fine-tune the sonic blend all along the rotation of the control pot.

Open up the control panels and adjust the sounds to your own tastes. Thousands of subtle and not-so-subtle variations are possible.

There is a tradeoff required between LFO width and LFO speed unless you are looking for sci-fi sounds. Many of the patches use a single control which turns the speed up while turning the width down to achieve a wide range of acceptable chorus sounds with a single control. This is less flexible than using separate controls, but it's entirely up to you.

In addition, the longer the chorus delay time, the less width you need to achieve a given level of detuning.
