Multiplying two signals with the Volume Block (#p1687)

by **Digital Larry** » Fri Jul 11, 2014 11:35 am

The single Volume block, under the **I/O - Mix** menu, performs a multiply between the "audio" input and the "control" input. In reality, either input could be audio or control. So, you can use this block with a Pot connected at the control input and a different control signal at the "audio" input, to scale that other control signal. If you connect the same signal to both inputs, the output will be the square of that signal.
